

READ ME

These LDT Files are numbered as per the Photometric numbering system used in all Hacel literature. The LDT Files for all Lamp Types and Wattage versions of the product are included as well as for any optional Reflectors where applicable. Consequently you should cross reference these LDT File names with the numbers published in our literature or the Product PDF on the website to ensure you are using the correct LDT File.

For multi-head luminaires the LDT File is relevant to only one head and therefore it should be imported in to the Lighting Design Software multiple times and manipulated to match the head spacings.
